- Registration:** Please register your interest to attend via Reinalda Pires.
Tel: +67077393553 or email: ABUW.BayuUndanEOI@santos.com

Who should attend the information session?

Businesses registered in Timor-Leste who operate in sectors related to the offshore oil and gas industry or onshore related services including but not limited to: fabrication, drilling services, general consumables and hardware supplies, logistics, among others. Due to COVID-19 travel restrictions, Santos representatives will present the sessions from an on-line platform.

What is the information session about?

Santos NA (19-12) Pty Ltd is the operator of the Bayu-Undan Facility, which is located in Timor-Leste offshore waters. Santos is currently in the planning phase for the Bayu-Undan Phase 3C Infill Wells Project. Recognising the relevance of this first Bayu-Undan drilling campaign to be carried out under exclusive Timor-Leste jurisdiction, Santos wishes to identify opportunities for activities to be conducted directly out of Timor-Leste.

Planning for this project includes engaging with local industry organisations and the Timor-Leste Government to identify opportunities for local participation during this next major phase of work. The session will provide an overview of the project, information about the planned activities and associated potential business opportunities for supply of goods and services.

In addition, Santos is requesting expressions of interest from companies capable of providing goods or services to the oil and gas industry who are a duly incorporated entity under the laws of República Democrática de Timor-Leste and who meet the applicable minimum requirements. Two expressions of interest have been published to date for the Phase 3C Project, which can be viewed here: <https://www.santos.com/procurement/bayu-undan-opportunities/>

About the Infill Wells Phase 3C Project:

The Bayu-Undan Infill Phase 3C Project is proposed as a fast-tracked infill drilling program to optimise and extend Bayu-Undan field production. The project is planned to include the drilling and completion of three new production wells. Drilling work could start as early as April 2021.

Important information: Santos notes that the potential Bayu-Undan Infill Wells Phase 3C Project is still in the assessment phase and that these information sessions do not bind any party to proceed with further contracting activities in respect of any of the work scopes. Further, attendance at these information sessions do not imply a contract with Santos. The aim of these sessions are to simply provide an overview of the Bayu-Undan Infill Phase 3C Project and potential business opportunities or supply of goods and services.
