

Public Announcement

The Autoridade Nacional do Petróleo (ANP) and TGS are pleased to announce the signing of an addendum to a 2D Cubed Multi-client agreement, which includes an additional development and delivery of the Facies Map Browser (FMB) products, marking a significant step forward in strengthening subsurface understanding and supporting future exploration initiatives in Timor-Leste.

The primary objective of this collaboration is to enhance regional geological knowledge by providing high-quality, integrated facies mapping products. These datasets are designed to support investors and operators in evaluating hydrocarbon potential, reducing exploration risk, and accelerating informed decision-making.

The FMB products will be developed using a robust and systematic methodology that integrates seismic interpretation, well data analysis, and regional geological studies. Advanced geospatial techniques and industry-leading workflows will be applied to ensure accuracy, consistency, and relevance of the outputs.

The area coverage is approximately 53,500 km², and it will focus on key offshore basins in Timor-Leste areas. This project will deliver a comprehensive regional insight that aligns with the country's strategic priorities for upstream development. Initial FMB datasets are expected to be available within an accelerated timeframe of 7 to 8 months, supporting early promotional efforts. This will enable ANP and TGS to actively engage with industry stakeholders, showcasing Timor-Leste's prospectivity and investment opportunities in upcoming international platforms, which includes a 3rd TLS Petroleum Licensing Round.

This partnership reflects a shared commitment to transparency, innovation, and sustainable resource development, positioning Timor-Leste as an emerging destination for upstream investment.

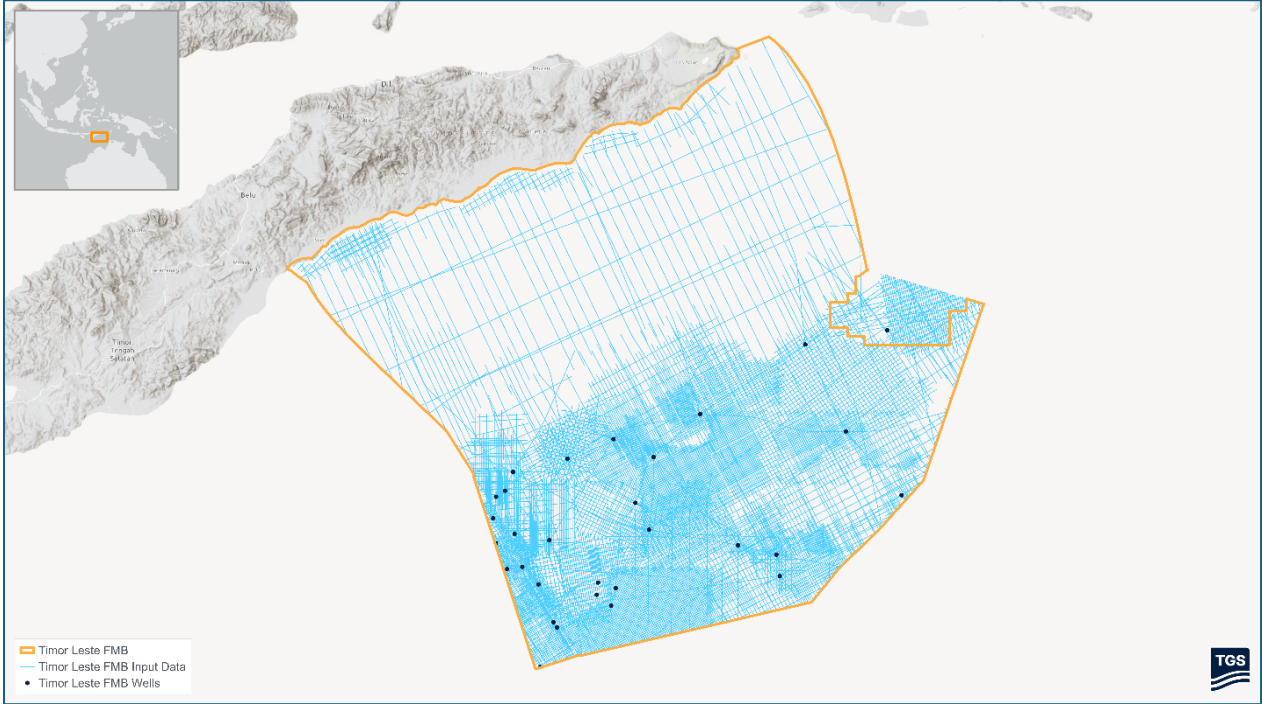

****Note:** If you need any further information then please do not hesitate to contact ANP at phone number +670 73099996 or email at info@anp.tl. Meanwhile, the TGS can be reached at <https://www.tgs.com/contact-us>

About TGS

TGS provides advanced data and intelligence to companies active in the energy sector. With leading-edge technology and solutions spanning the entire energy value chain, TGS offers a comprehensive range of insights to help clients make better decisions. Our broad range of products and advanced data technologies, coupled with a global, extensive and diverse energy

data library, make TGS a trusted partner in supporting the exploration and production of energy resources worldwide. For further information, please visit www.tgs.com (<https://www.tgs.com/>).
